

Sensing Changes: Technologies, Environments, and the Everyday, 1953-2003 (Nature/History/Society)

Our bodies are archives of sensory knowledge that shape how we understand the world. If our environment changes at an unsettling pace, how will we make sense of a world that is no longer familiar? One of Canada's premier historians tackles this question by exploring situations in the recent past where state-driven megaprojects and regulatory and technological changes forced ordinary people to cope with transformations that were so radical that they no longer recognized their home and workplaces or, by implication, who they were. In concert with a ground-breaking, creative, and analytical website, megaprojects.uwo.ca, this timely study offers a prescient perspective on how humans make sense of a rapidly changing world.

Sensing Changes Technologies Environments And The Everyday The Nature History Society series is devoted to the publication of high- 1953-2003 Sensing changes : technologies, environments, and the everyday, **PhD course New Natures: Histories of Environment and Technology** 1953 2003 Nature History Society is available on print and digital edition.
