

The Challenge of Geriatric Medicine (Oxford Medical Publications)

The expression Giants of Geriatrics, coined by Professor Isaacs has passed into medical language to describe the principle chronic disabilities of old age: immobility, instability, incontinence, and intellectual impairment. Chapters on each of these have been supplemented by chapters on five further Giants: stroke, aphasia, depression, and visual and auditory handicap. Each chapter ends with a short critical bibliography, and the most significant points are encapsulated in original aphorisms. The aim is to provide practical guidance in non-specialist language for management of the Giants, concentrating on areas of geriatric medicine which are not normally available in standard textbooks.
